CURRENT OBJECTIVE

Final-year Information Systems student at UIT – VNU-HCM. Seeking an Intern or Fresher Fullstack Developer position to contribute to real-world projects and further develop professional engineering skills.

EDUCATION

- University of Information Technology (UIT) – VNU-HCM** 2023 – Present
Bachelor of Information Systems | GPA: 3.15/4.0 Ho Chi Minh City, Vietnam

SKILLS

Programming Languages:	Java, JavaScript, TypeScript
Frontend:	React, Tailwind CSS, Redux Toolkit, HTML, CSS
Backend:	Spring Boot, NestJS
Database:	PostgreSQL, SQL Server, MongoDB
Distributed Systems:	Microservices, Spring Cloud Gateway, Config Server, Eureka, RabbitMQ, Redis
Testing & Observability:	Spring Boot Actuator, Prometheus, Grafana, Loki, Tempo, Load testing(K6)
Tools & DevOps:	Git, GitHub, GitHub Actions, Postman, Docker (basic), Swagger, VS Code
Language Skills:	IELTS 6.5 (Listening: 7.5, Speaking: 6.0, Reading: 7.0, Writing: 6.0)
Other Skills:	Linux(Ubuntu), teamwork, learning and applying new technologies

EXPERIENCE

- AI Power Co., Ltd** Apr 2026 – Aug 2026
Intern Software Developer
 - Resolved production bugs and addressed client feedback for a near-complete QA reporting application.
 - Joined the frontend team to integrate RESTful APIs into a large-scale digital transformation platform for an enterprise client, collaborating closely with backend developers and QA testers.
 - Owned a full-stack feature in a multi-tenant SaaS product (Vertical Slice Architecture): built per-tenant branding and theming - dynamic logo, background, color scheme, and layout customization controlled by each tenant's admin - across both backend and frontend.
 - Gained practical experience in teamwork, Linux (Ubuntu) development environments, reading business and technical documentation, multi-tenant architecture design, and end-to-end feature ownership.

PROJECTS

- Seika — Microservices E-learning platform** Mar, 2026 – Jul, 2026
Team Leader, Fullstack Developer
 - Architected an event-driven Spring Boot microservices platform with 8 domain services, API Gateway, service discovery, centralized configuration, and database-per-service ownership.
 - Engineered reliable marketplace-wallet transactions using RabbitMQ, Transactional Outbox/Inbox, idempotency keys, retry/backoff, DLQ, and pessimistic locking to prevent duplicate processing and double spending.
 - Designed a multi-bucket wallet, ledger, and escrow system supporting rewards, paid coins, teacher earnings, revenue sharing, refunds, cash-out, and fraud-related fund holds.
 - Implemented centralized JWT authentication, Redis-based token revocation, role-based authorization, and per-user/IP rate limiting at the API Gateway.
 - Built a role-based React/TypeScript SPA for students, teachers, and administrators with typed Redux state, API adapters, queued token refresh, and authenticated SSE notifications.
 - Established distributed observability using Micrometer, OpenTelemetry, Prometheus, Grafana, Loki, and Tempo; added targeted tests for concurrency, idempotency, caching, authentication, and outbox workflows.

CERTIFICATIONS

- Introduction to Git and GitHub (Google) – Coursera** Oct 2024
- The Complete 2024 Web Development Bootcamp – Udemy** Jan 2025
- IELTS 6.5 – IDP Vietnam** Dec 2022
